

## **Test Cases:**

- Check whether the generated OTP is valid from one time or not.
- Check if the one-time password is generated within the specified period or not.
- Check whether the OTP is delivered to the requested user within time.
- OTP should be delivered to the registered email ID or contact number.
- Check the duration the user received the OTP-generated code sent by email.
- Check if the application is accepting the provided OTP or not..
- Check the number of times a user can enter an invalid OTP.
- Check that the OTP code expires after the application or software allows it.
- Check if the user can log in with the expired OTP.
- Verify that the system temporarily blocks the account, after multiple invalid tries.
- Check by entering the invalid Phone Number or E-Mail address that the system is sending any OTP or not.
- Check on entering the valid OTP and whether the correct info message is displayed.
- Check on entering the invalid OTP; the error info message is displaying or not.
- Check if the one-time password is only numeric or not.
- Check if there is any pause time to resent the OTP again.
